

CRITICAL INFORMATION SUMMARY

INFORMATION ABOUT THE SERVICE

SERVICE DESCRIPTION and KEY INFORMATION

TMC Connect NBN+4G provides asymmetrical high speed internet access via the National Broadband Network and mobile 4G failover where Optus 4G network is available. The service comes with static IP addresses for both the NBN connection and the 4G mobile service, and unlimited data allowance each month. **Important Conditions:** 4G failover applies only if there is an event of an NBN outage or service fault. It is not to be used in the event of a CPE failure. TMC Connect reserves the right to suspend the 4G failover service if a breach of this usage is detected. The service is not to be used for load balancing or bonding.

SERVICE INSTALLATION

Standard installation is included if the service is to be connected in an existing developed area. Additional charges may apply if your service installation is deemed to be non-standard. NBN Co will deliver your service to the Network Boundary Point at your premises. The cabling that is required in your premises beyond the Network Boundary Point is your cost and responsibility, as is the provision of a suitable 240V AC power outlet. NBN Co may charge a \$300 new development fee for the cost of deploying network infrastructure to new premises or dwellings, which will appear on your first bill. If you choose to install a second service at the same premises, you will be charged \$297. Please contact our Customer Care Team for further information.

HARDWARE REQUIREMENT

You will require a suitable NBN and 4G failover compatible modem/router for the service to work. If required, we can supply you with the required hardware at an additional cost. Please contact our Customer Care Team on 1300 846 046 for further information.

IMPORTANT CONDITIONS REGARDING SPEED

Interface speeds refer to the speed of the technology installed at your premises. They are not necessarily equivalent to the download/upload speeds you will achieve in practice. Actual speeds will be affected by many external factors which include the number of end-users using the service at the same time, the hardware, the software and software configuration, the connection method within the premises and the type/source of content being downloaded. In the case of NBN connections delivered using FTTN (Fibre to the Node) technology, the distance you are away from the node will affect maximum available speeds.

SERVICE AVAILABILITY

The service is subject to NBN availability at your premises. To check availability please contact our Customer Service Team on **1300 846 046**.
